DISCREET INTERNAL DOME HOUSING

The Vista VIH-CD120 internal half sphere dome housing has been designed for use with most camera/lens combinations. The design allows for speedy installation by the engineer, with subsequent easy access for the end user to meet regular servicing requirements.

Being small yet stylish, this housing also manages to hide any unsightly cables allowing this unit to become extremely discreet while still providing an impressive degree of protection to both camera and lens.

Please note that this housing is not suitable for solid ceilings. Should the environment contain fibre-ceiling materials, they may need to be strengthened.

THE UK'S PREMIER CCTV BRAND
