

VISTA VVR

RANGE OF VCERS

Rear input panel

INTUITIVE VCERS

The Vista VVR27HRe and VVR960HRe VCRs are state of the art time lapse machines packed with an array of advanced features. Astonishingly however, they are a surprisingly more cost effective option than many alternative machines with far lower specifications.

As well as having all the standard features you would expect from a Vista Time Lapse VCR - simplistic operation, robust construction and in-built reliability, the units come with an intuitive tape management system which is controlled via an On Screen Display (OSD).

This extremely powerful function allows end users to effectively monitor automatically how many times the tape has been used by the machine, in fact the unit with prompt operators when a tape should be changed. In addition, the tape management system also allows tapes to be password protected to avoid accidental erasure of critical imagery.

The implications on effective tape rotation, lower unit maintenance costs and Data Protection Act compliance are as clear as the resulting recorded quality. It is for such reasons that the Vista VVR27HRe and VVR960HRe Time lapse VCRs are as popular with end users as they are with installers.

IDEAL FOR APPLICATIONS SUCH AS:

- Retail environments
- Banking and financial institutions
- Office complex
- Leisure amenities
- Petrol stations
- Warehousing and industrial locations

MAIN FEATURES:

- Tape management
- JOG / Shuttle
- Clog detect
- High speed fast forward and rewind
- Field recording
- Series recording
- Alarm record function
- On screen display
- Time and date
- Time and date search
- 30 day memory back up
- Security lock
- Recording check function
- Auto head cleaning
- Synchronisation control function

Jog shuttle for ease of control
